

Chelsea. The great American clockmaker.

The more you learn about clocks, the more you understand why people become so attached to a Chelsea. It represents the highest level of clockmaking achievement; an heirloom to be passed from one generation to the next.

This superlative world-class clock has been the prized possession of John F. Kennedy, Aristotle Onassis, Pope John Paul II, Franklin D. Roosevelt, Leonid Brezhnev, Dwight D. Eisenhower, and virtually every American president since the Chelsea company was founded in 1897.

The living past.

The unique balance wheel escapement that we use in our mechanical clocks today is identical to the original escapement first patented by Chelsea in 1897. (Not only do we strongly believe this is the finest escapement in the world, apparently so do the many other companies who have tried so hard to duplicate it.)

The new. Too many clockmakers have utilized quartz timekeeping solely as a means to reduce their costs. Chelsea has re-

efined the advantages of quartz technology and combined them with a hand-built mechanical movement to produce the ultimate in quartz timekeeping. This new-breed Chelsea quartz movement combines the accuracy and convenience of battery operation with the durability, craftsmanship, and reliability of our mechanical designs.

You'll find this exclusive quartz movement in many of the clocks presented on these pages. Like its famous mechanical counterpart, the Chelsea quartz movement is made only with brass and steel parts. Jeweled bearings virtually eliminate wear points. For durability, the movement's gears are cut from brass and then gold-plated. (Why hide gold in a clock's movement where you can't even see it? Because no other material so well resists the ravages of time.)

Like its mechanical counterpart, the quartz clock is meticulously hand assembled, tested and regulated. The finished timepiece is then numbered and registered in a ledger. If the clock should ever return for servicing, Chelsea's master clockmakers will know when, how and by whom the clock was built, and it will be serviced accordingly.

A feast for your eyes. One of the continuing pleasures of Chelsea ownership is in the clock's myriad of fine con-

struction details—you can examine the clock many times over before all of these unique details reveal themselves to you.

Cases are made of heavy, solid brass plates. How heavy? You'll see when you lift a Chelsea and then lift any other similar-sized clock. Depending upon the model, these cases are either gold-plated or lacquered brass. Some have diamond-cut beveled edges that achieve a remarkable mirror finish. Some have a plated, sterling silver finish on dials, sides, and fronts. There is a unique guilloché finish on two models in the Eagle series. (Guilloché is a textured finish with facets that reflect light and shadow much like fine jewelry.) Other cases are Peking black, or tortoise shell enamel. At the back of each case (except for the Ship's Bell Series) is a hinged door revealing the clock's hand-built movement.

The tone of a Chelsea striking clock is memorable. On the hour and half hour, when the striking mechanism's hammer strikes a tuned steel coil, the entire brass case resonates to produce Chelsea's richly classic tone.

In all, a Chelsea is more than a miraculously accurate timepiece. Its unique level of finish is an enduring tribute to the clockmaker's art. For quality you can see, touch and hear—for quality that can be handed down from generation to generation, for you there is only Chelsea.
